FolderMatch Free For Windows

Appliance Freeware Last updated: February 2nd, 2010 Requires OS: Windows 2000, Windows XP, Vista, Windows 7 A small, but useful utility that helps you to quickly find the location of the running application by using just its title. IntelliTrace is a tool that can display the paths to running applications which are used for frequently performed commands. For instance, you may launch your browser when you need to open a specific website, launch your calculator when you want to perform a math calculation or launch Word when you need to create a new document. Once you specify the commands, a small window opens, where you can see the command lines. Pressing the left or right arrow keys shows the history of the applications and the selected location. The utility provides you with a customizable list of applications, so you can check the ones you use the most. You can define the number of items in the list, as well as the location of the folder for these items. There is also an option to include programs with a specific file extension. A nice feature is the fact that IntelliTrace can recognize file types of your documents, so you can open them with the specified application. The application also supports drag-and-drop functionality, and also includes a clipboard monitor. Additionally, the software has a nice and clean interface. It has no extra windows, and the file and folder view is only available in the main window. We're not sure that this utility has any more features, but it is a handy tool for windows of any kind, as it does what it says. IntelliTrace uses no system resources, and it is freeware. IntelliTrace Description: Freeware Last updated: December 3rd, 2003 Requires OS: Windows 2000, Windows XP Easy file manager that has a nice interface, is easy to understand and gets the job done. Thumbator is a well designed application for Windows that allows you to access all your files. It makes it easy for you to select files and folders, with a simple, yet powerful browser. You will also find there a list of the most used file types on your computer, and where they are located. Some features include shortcuts to all your files, and a list of all your programs, folders and documents. Among other things, Thumbator helps you to open the file, edit it or perform a few actions on it, such as highlight text, insert a picture.

FolderMatch Incl Product Key

FolderMatch is a utility that performs content-aware synchronization between source and target folders. Being content-aware, it only changes files that are identical between the source and the target folder. This is done by comparing the file content, attributes and modification date. You can start the process by dragging files into the target folder or from a special "Sync Folder" window. Key Features: - Synchronize your files between folders, folders within folders, and even folders within folders within folders. - In a folder-by-folder comparison, you can choose whether to add, replace, or simply delete files. - Includes in-depth file comparison logic in every comparison. It can show you how files differ and why they differ by displaying them with the hexadecimal dump editor. - Assign a custom sync script to any folder. This is especially useful if you choose to replace certain files or folders instead of simply adding or deleting them. The script can be used in any folder. - Compare the size of files, all file properties, dates, timestamps, and permissions. - Compares all file content. It even recursively compares subfolders, no matter how deep they are. - Customizable search behavior for files, subfolders, and attributes. - Graphical representation of objects that are different, and an array of previews to help you easily identify the differences. - In-depth file comparisons - Some useful options - Clearly customizable mouse and keyboard shortcuts - Selective file replacement - Debug dialog to view the values of most variables - Fast, customizable, and easy to use. - Support for any type of local and remote file system. - Works on Windows, Linux, and Mac OS X. FolderMatch Description: FolderMatch is a utility that performs content-aware synchronization between source and target folders.
