Left and right channels, stereo down mix, or any chosen side 2. All channels (besides tape and microphone) mixed into single output - Host integration - Multitimbral music editing - VST and VSTi compatible - Supports almost any host: Cubase, Sonar, Logic Pro, Reaper, Nuendo, REAPER, Adobe Audition - Cross platform (Mac, Windows) - 64bit (SOLARIS and LINUX) - Authoring: VST SDK support - General Notes: - On big scales, channel strips may overlap. - A channel strip has a unique name, color and icon. - A strip (cabinet) has a unique name, color and icon. - A strip can be dragged out into its respective parent. - There is no limit to the number of strips. - A strip will snap to its parent, not to the desktop. - A strip may be freely removed. - A strip's contents will be removed upon removal of the strip. - Internal structures are protected from users, i.e. files inside a strip are kept separate.In my recent research I spoke to a number of AANZTAC members who were either studying abroad or currently on Exchange or have been on Exchange. What they said, was that Exchange has made their experience worthwhile, because so far they have had an impact on their teaching styles and students. Moreover, these students seemed to be interested in different ways of teaching and learning. They mentioned things that they learnt from different intercultural encounters: (a) Different students had different learning styles, some liked to read assignments and some liked to solve assignments. Some students were good at taking classes and others learnt best in groups. (b) One way to create a learning environment

Unique combination of modular synthesizer and vintage pitch/modulation envelope generator A modular synthesis environment with a variety of patches, based on modern audio software synthesizers Suitable for both classical and contemporary music Simple input modulation with pitch and modulation wheels Direct access to the envelope of a signal – with the possibility to expand the modulation to the filter and amplifier, if desired Contemporary digital effects and algorithmic sounds Chorus, Phaser and FilterGate Modulation Routes LFO and ADSR Multi-track output of a signal through a gate GTG 44 S Effects: OSCIL The oscillator is a classic sine/square/sawtooth, with 5 slots, each with independent shape and frequency control. In addition, the oscillator's volume and resonance can be controlled separately. ENVELOPE An ADSR generator for the amplitude of the oscillator, allowing compression and modulation with the LFO (FM, CC,

and Random). LFO An LFO can control the pitch of the oscillator with exponential and linear interpolation, using independently modifiable rate and depth control. In addition, the LFO can be split into any number of LFOs on the same input using the number of channels as the bus rate. AMPLIFIER An envelope filter with similar decay time to the oscillator, with RangLFO: A/B mode and shape control. DIRECT FILTER Very similar to an oscillator with its own LFO that can be used to contrast, attenuate, sustain, hold, or sustain modulation of the filter with the envelope. Filters can be inserted in any order, receiving signals from a multichannel submix/mixdown. CHORD The chord mode contains the dedicated LFO PitchEnv, with volume and frequency control; LFO PAD can be also inserted and connected to any other channel in the mixer. NOISE A simple noise generator DETUNE A detuning generator is provided (one waveform), with depth control. CHORUS The chorus section is modulated by a LFO or sent directly, with LFO depth and modulation depth. PHASER A Phaser is a
