Adobe Photoshop 2020 (version 21)

The borderless border option within the crop tool enables you to easily make your cropped area borderless. You can use the Resample Image tool to shrink or enlarge the image without reducing quality. Making Borders So You Can Stop Worrying About Them The one aspect of image-editing software that most beginners (and some professionals) have trouble with is the image border. Often, a cropped area you need to crop out of an image is in the background, and a (often invisible) image border is on the other side of the background. But you don't need to be bothered by an image border. After you create your image, crop out the area you need to work with, and make a new layer for your work, you can easily set a specific border for that layer. The image border that's visible in the new layer becomes transparent, so you see the image inside the cropped area as it was before the cropping process, yet you still have the perfect border for cropping out. Saving the old image and adding a new border creates a new image that's visually and technically identical to the original image. No matter how many times you crop and change the image, you will always have a visually identical image — but, of course, you'll be able to edit only your cropped image. Creating new borders Saving and using a new border can produce all sorts of neat effects that enable you to control how much or how little of an image you're displaying at any given moment. The most obvious example is the border you see when you use the Crop tool. As you edit your cropped image, you may want to display a little more or a little less of the original image, and a new border shows that change. This form of border enables you to make some basic aesthetic choices about the presentation of the image, such as choosing whether you want to reveal more or less of the original background or showing the original on a different background. In addition to creating new borders, you can change the look of existing ones. You can do this in any of the available editing modes, including layer modes, but I prefer to make the change in Layer mode. For example, when I'm working on a color image, I often have a white background and a colored border around my layers to help with color matching. Using the Crop tool, I crop out a piece of my original image and use this new layer as my work area. Then

Photoshop is one of the most powerful tools for photo editing and it is available for free. Photography

has become much easier over the last few years through the use of digital cameras and Photoshop. All of us have learned the basics of editing an image in Photoshop but there are many shortcuts and shortcuts to shortcuts that are not often explained. I am writing this article to give you a quick tour of all of the shortcuts, features and plugins that make your life easier. Shortcuts in Photoshop Having shortcuts in Photoshop saves a lot of time and mouse clicks. You can save quite a bit of time by using keyboard shortcuts, because by using the arrow keys on your keyboard you can create instant previews of an image, rotate the image, select the tool you wish to use and much more. It's a simple matter to scroll through the tools and plugins to select the one you wish to use but it takes time to remember which buttons you need to press. When you press any of the hot keys, the keyboard shows you all of the shortcuts in a separate tab at the top of your workspace. This is great for remembering all of the shortcuts used to select elements in a new image or for copying a color or brush. The currently active button is shown in the upper-right hand corner of the screen. On a Mac it is shown in the menubar. It is not a bad idea to bookmark a hotkey as it saves a lot of time and hassle of using it, then pressing 'Esc' and entering it again! Creating a shortcut Creating a shortcut is as simple as a click on 'Create Shortcut' at the top-right of the Screen. The shortcut is created to activate one of the tools. However, you can create shortcuts for any of the tools available in Photoshop. You can also use keyboard shortcuts to activate the tools, but the hotkeys are generally faster. Creating a shortcut You can use the keyboard shortcuts or shortcuts to activate plugins and such. When you first use Photoshop, you're presented with a lot of information and a lot of options. One of the first things you need to do is to learn the keyboard shortcuts, then you can move on to the other things. The shortcuts are shown under the 'Customize' button as a separate tab at the top of the screen. This will show 388ed7b0c7

Q: How to use AWS emr get job flow information I use emr with java and I want to use the get job flow information. But I don't know how to do it. I found the doc but I didn't understand if I can do it. A: If you only need the information, the call is pretty simple, just like the documentation states. public String getJobFlowInstanceId(GetJobFlowInstancesRequest inRequest) throws HadoopIllegalAccessException { String location = inRequest.getInstanceType() == null? inRequest.getJobFlowType() : inRequest.getInstanceType(); String cluster = inRequest.getClusterName(); String jobFlowName = inRequest.getJobFlowName(); ARN getJobFlowInstanceId = new ARNBuilder(AmazonEmrClient.DEFAULT_HOST_NAME).withRegion(AmazonClientPolicy.DEFAULT_REGION).withServiceName(AmazonEmrClient.DEFAULT_SERVICE_NAME).withAccessKeyId(AWS_ACCESS_KEY) .withSecretKey(AWS_SECRET_KEY).withPartition(location).withDryRun(true) .withRegion(location).withDryRun(true) .withArn(new ARN(instanceId)).build(); return new SimpleStringService("", getJobFlowInstanceId); } However, it is more appropriate

Q: Getting unicode error while processing an XML feed using Python Feed I'm trying to extract data from a xml feed. I have a sample of the xml: I'm using the feedparser library to parse the data, and this is my sample code: import feedparser import re feedUrl = '' parser = feedparser.parse(feedUrl) for feed in parser: for item in feed: if feed.startswith('item'): print feed.attrib['link'], feed.attrib['title'], print feed.attrib['category'], feed.attrib['id'], print feed.attrib['guid'], feed.attrib['description'], print feed.attrib['pubDate'], ' ' For some reasons I'm getting a Unicode error in feedparser module, which prevents the code to run. >>> unquote(feedUrl).decode('utf-8') u'' >>> feedUrl = unquote(feedUrl).decode('utf-8') Traceback (most recent call last): File "", line 1, in UnicodeEncodeError: 'ascii' codec can't encode characters in position 1-5: ordinal not in range(128) I'm on Python 2.7 and using Eclipse. I have installed the feedparser library with the simple install.py script. A: I had this same problem. feedparser was throwing a Unicode error because it was receiving a URL to a UTF-8 encoded document. This is a likely case with this error. You can try to strip the URL of it's UTF-8 encoding by replacing "u" with " ". parser = feed
